Cognitive Skills Test Report

Candidate: Amy Sampleuser

Date: June 19, 2020

Date: 06/19/2020

The following pages represent a report based on the results of a psychological assessment. The profile presented below summarizes key results in each area compared against general population norms (indicated by the descriptors Low, Below Average, Average, Above Average, and High) and with norms for high performers in the type of job for which the candidate is applying (indicated by the shaded areas). The candidate's score is indicated by the diamond symbol : ◆

ALL RESULTS SHOULD REMAIN STRICTLY CONFIDENTIAL

General Cognitive Aptitude

GENERAL COGNITIVE APTITUDE SCORE INTERPRETATION & FEEDBACK

Compared to general adult norms using standardized tests which were validated for a wide range of positions, we estimate Amy's overall level of general intellectual aptitude to be in the **80-89 percentile** range. Her individual aptitude levels are:

Abstract Reasoning Top 5%ile

Numeric Reasoning 40-49%ile

Verbal Reasoning 80-89%ile

Amy has a high level of general cognitive aptitude. She can learn new information quickly, solve complex problems efficiently, and be able to handle a heavy information-processing load on this job.

Test	Percent Correct Score	This score is considered to be:
Grammar & Spelling Test	80% Correct	Above Average

Explanation of this “Percent Correct” Aptitude Score

The scoring for tests like this one is based on a “percent correct” calculation which is total number of correct answers divided by total number of questions on the test. The candidate has ample time to complete each question, so it is possible to achieve a 100% score.

Lower scores suggest the candidate will make a high number of errors on the job. Their basic skills in this topic area are probably lacking. If hired, you need to consider on-the-job training in this topic area.

Higher scores suggest the candidate is less likely to make mistakes of this type on the job. Their skills are adequate to good, so they can probably improve accuracy as they practice tasks on the job - especially if you give them feedback about errors as they occur during job performance.

We offer the following guideline:

0% to 50% correct	51% to 70% correct	71% to 85% correct	86% to 100% correct
Low Score	Below Average	Above Average	High Score

Most companies are simply trying to weed out candidates who would have the most trouble handling job tasks of this nature. If that is the case, you need to think about what is the lowest “Percent Correct” score you will tolerate. If errors are not particularly costly to your operations, then you may be able to accept candidates who score in the Below Average range.

Some companies are trying to enhance the overall quality of their workforce with the use of standardized aptitude testing. If this is the case for your company, then we advise that you accept candidates in the Above Average or High categories. If errors of this nature cause very serious problems in your company, then you should only hire people who score in the High category.

APTITUDE ASSESSMENT

	Percentile Range									
	0-10%	10-19	20-29	30-39	40-49	50-59	60-69	70-79	80-89	Top 10%
Numerical Computation								X		

Explanation of Cognitive Aptitude Scores:

The aptitude scores in this section reflect percentile rankings -- not percent correct on the test. With percentiles, the average is the 50%ile. Half of the people score below this score and half score above it. As another example, if a person scores 80-89%ile on a specific test in this report, it means that they scored as well as or better than 80-89% of the norm group, but not as high as 11-20% of the norm group.

The **Overall Cognitive Aptitude** is an average of the separate aptitude sections given to this candidate.

The lower the Overall Cognitive Aptitude score, we predict that the candidate will have difficulty learning new information and making decisions. For example, if they are well experienced in their occupation, they may be able to continue to perform well practiced tasks adequately, but have difficulty learning new things. As such, they will need additional training time and more support from supervisors. People who produce lower Overall Cognitive Aptitude scores generally prefer tasks that call for specific responses rather than ones requiring insightful solutions. They are also slower in processing information and are often easily overwhelmed by complex problems, especially ones they have not dealt with before.

The higher the Overall Cognitive Aptitude score, the more we predict that the candidate will learn quickly, pick up a lot of new information on their own without needing to be trained, handle a large information load easily, make decisions in an efficient manner, and show a great deal of insight about how to solve new and complex problems.
